

02]

Q4] The only weak entity in this model is Enrollment. This is because it does not have a Primary key consisting of attributes of its own, but has 2 foreign keys taken together as its Primary key. Therefore the entity's existence depends on the existence of the other 2 entities. Remaining all the entities are strong.

Q5] There is no data redundancy ~~of~~ occurring in this model. All the tables have the necessary and relevant information stored in them, and where there is a need, foreign keys are made use to reference data in other relations.
